TRAINING AND SOFT SKILLS DEVELOPMENT

More than 600 students from our college were placed in organizations such as Micro Labs, Biocon, Biovet, Myva, Global Calcium, Infosys, and numerous private limited companies, all of which offered reasonable wages. The program's impact goes beyond boundaries, with some students receiving research fellowships or finding work in other countries, demonstrating its success in preparing them for the global stage.

In our college's final year Chemistry and Biotechnology classes, more than 30 students are chosen to complete the sixth semester at CHEMPLAST SANMAR Company with the assistance of our Unnati skill development trainers in the academic year 2023-2024. The Soft Skills Development Programme opens up a world of possibilities for our pupils. The programme provides them with the information and tactics needed to ace job interviews and build excellent communication skills, particularly in English. Interactive sessions with experts help individuals overcome stage anxiety and gain the courage to speak confidently and answer questions with composure. This translates into real-world success, with graduates obtaining positions in leading firms.

CREATIVE ART AND CRAFT

Creative art and craft involve making things with one's hands, fostering creativity and self-expression. These activities, such as drawing, painting, sculpting, knitting, and woodworking, use various materials like paper, clay, fabric, and metal. Engaging in art and craft enhances creativity, improves fine motor skills, reduces stress, boosts self-esteem, and encourages problem-solving. It also promotes social interaction through group activities. From traditional forms like drawing and sculpting to modern digital art, creative art and craft offer endless possibilities for personal development and enjoyment, making it a valuable and enriching pursuit for people of all ages.
